SUBJECT INDEX

- Atmospheric parameters
 - effect of atmospheric parameters on solar cell performance under global irradiance, 59
- Chemical vapour deposition
 - fabrication and characterization of SnO_2 : F/n-Si(poly) solar cells prepared by chemical vapour deposition, 163
- Collectors
 - hybrid a-Si photovoltaic and thermal solar collector, 131
- Control
 - automatic monitoring and control of hazardous hydride gases, 263
- CuInSe₂/CdZnS
 - some health and safety concerns in the research and production of CuInSe₂/CdZnS solar cells, 237
- Deposition
 - fabrication and characterization of SnO_2 : F/n-Si(poly) solar cells prepared by chemical vapour deposition, 163
 - safety comparisons of various gas source deposition technologies for large-scale production of III-V solar cells, 245
 - safety in thin film semiconductor deposition, 215
- Efficiency
 - near-term higher efficiencies with mechanically stacked two-colour solar batteries, 73
 - optimum efficiency of single and multiple bandgap cells in thermophotovoltaic energy conversion, 19
 - theoretical efficiency of realistic solar cells intended for thermophotovoltaic applications, 123
- Ergonomic laws
 - ergonomic laws for the photovoltaic industry, 375
- Hazards
 - electrical and electromagnetic hazards in the manufacture of thin film solar cells, 45
 - gas hazards and preventative equipment, 355
- Health
 - defining, developing and operating an effective safety and health program, 333
 - public health issues in photovoltaic energy systems: an overview of concerns, 287
 - some health and safety concerns in the research and production of CuInSe₂/CdZnS solar cells, 237
- High-efficiency cells
 - identification of some key parameters limiting the performance of high-efficiency Si solar cells, 9
- Hydride gases
 - automatic monitoring and control of hazardous hydride gases, 263
 - hydride gas decomposition in thin film Si-H alloy processing, 301
- Hydrogen
 - hydride gas decomposition in thin film Si-H alloy processing, 301
- Hydrogen selenide
 - precautions with hydrogen selenide, 283
- Indium phosphide
 - a new approach for thin film InP solar cells, 85
- Integral bypass diodes
 - shadow tolerance of modules incorporating integral bypass diode solar cells, 109
 - thermal performance of integral bypass diode solar cells, 97
- Metallization grids
 - determination of the optimum transparency factor for solar cell metallization grids, 139

Monitoring

- automatic monitoring and control of hazardous hydride gases, 263
- continuous on-line monitors for dopant and reactive gases, 367

Optically induced degradation

- optically induced degradation in a-Si:H solar cells, 39

Photoelectrochemical cells

- multiple junction II-VI compound photoelectrochemical cells, 171

Planning

- development and implementation of an effective emergency preparedness plan, 345
- identification of training and emergency planning needs through job safety analysis, 337
- routine emissions and accidental releases of toxic air pollutants — risk, response and planning, 315

Reference cell method

- applicability of the reference cell method to the performance measurement of a-Si solar cells with a spectral response shift, 149

Resistance

- calculation of the resistance of the diffused top layer in a photovoltaic cell, 1

Risk

- routine emissions and accidental releases of toxic air pollutants — risk, response and planning, 315

Safety

- automatic monitoring and control of hazardous hydride gases, 263
- continuous on-line monitors for dopant and reactive gases, 367
- defining, developing and operating an effective safety and health program, 333
- development and implementation of an effective emergency preparedness plan, 345
- 86 400 times a day: the role of management in thin film photovoltaic safety, 203
- electrical and electromagnetic hazards in the manufacture of thin film solar cells, 45

gas hazards and preventative equipment, 355

identification of training and emergency planning needs through job safety analysis, 337

laboratory safety procedures for processing II-VI and related compounds for thin film photovoltaics, 225

personal safety in thin film photovoltaic cell industries, 269

photovoltaic energy systems and consumer product safety, 325

precautions with hydrogen selenide, 283

progress in Semiconductor Equipment and Materials Institute (SEMI) safety standards, 383

public health issues in photovoltaic energy systems: an overview of concerns, 287

routine emissions and accidental releases of toxic air pollutants — risk, response and planning, 315

safety comparisons of various gas source deposition technologies for large-scale production of III-V solar cells, 245

safety in thin film semiconductor deposition, 215

safety procedures used during the manufacturing of a-Si solar cells, 189

Semiconductor Safety Association, 389

some health and safety concerns in the research and production of CuInSe₂/CdZnS solar cells, 237

SEMI standards

progress in Semiconductor Equipment and Materials Institute (SEMI) safety standards, 383

Shadow tolerance

shadow tolerance of modules incorporating integral bypass diode solar cells, 109

Silicon

applicability of the reference cell method to the performance measurement of a-Si solar cells with a spectral response shift, 149

a-Si solar cell modules fabricated with a single-chamber load-lock deposition system, 179

- fabrication and characterization of SnO_2 : F/n-Si(poly) solar cells prepared by chemical vapour deposition, 163
 - hybrid a-Si photovoltaic and thermal solar collector, 131
 - hydride gas decomposition in thin film Si-H alloy processing, 301
 - identification of some key parameters limiting the performance of high-efficiency Si solar cells, 9
 - material issues in a-Si technology, 259
 - optically induced degradation in a-Si: H solar cells, 39
 - safety procedures used during the manufacturing of a-Si solar cells, 189
- Single-chamber load-lock deposition
 - a-Si solar cell modules fabricated with a single-chamber load-lock deposition system, 179
- SnO_2 : F/n-Si(poly)
 - fabrication and characterization of SnO_2 : F/n-Si(poly) solar cells prepared by chemical vapour deposition, 163
- Spectral response shift
 - applicability of the reference cell method to the performance measurement of a-Si solar cells with a spectral response shift, 149
- Thermophotovoltaic applications
 - theoretical efficiency of realistic solar cells intended for thermophotovoltaic applications, 123
- Thermophotovoltaic energy conversion
 - optimum efficiency of single and multiple bandgap cells in thermophotovoltaic energy conversion, 19
- Thin films
 - 86 400 times a day: the role of management in thin film photovoltaic safety, 203
 - electrical and electromagnetic hazards in the manufacture of thin film solar cells, 45
 - hydride gas decomposition in thin film Si-H alloy processing, 301
 - laboratory safety procedures for processing II-VI and related compounds for thin film photovoltaics, 225
 - new approach for thin film InP solar cells, 85
 - personal safety in thin film photovoltaic cell industries, 269
 - safety in thin film semiconductor deposition, 215
- III-V compounds
 - safety comparisons of various gas source deposition technologies for large-scale production of III-V solar cells, 245
- Toxic pollutants
 - routine emissions and accidental releases of toxic air pollutants — risk, response and planning, 315
- Training
 - identification of training and emergency planning needs through job safety analysis, 337
- Transparency factor
 - determination of the optimum transparency factor for solar cell metallization grids, 139
- Two-colour solar batteries
 - near-term higher efficiencies with mechanically stacked two-colour solar batteries, 73
- II-VI compounds
 - laboratory safety procedures for processing II-VI and related compounds for thin film photovoltaics, 225
 - multiple junction II-VI compound photoelectrochemical cells, 171
